

The blessing of ocean, “fucoidan” with possibilities

FP series

Mitochon Water

Grew in beautiful ocean with coral reefs of Kingdom of Tonga
Slimy component, “fucoidan”, extracted from natural mozuku helps
your lively and healthy life.

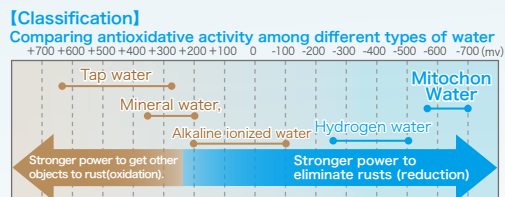

What is “antioxidative activity”?

It removes active oxygen from your body, which helps prevent lifestyle disease and aging.

Oxidation (Positive) The stronger positive a material possesses, the more active oxygen it produces.

Reduction (Negative) The stronger negative a material has, the more active oxygen it eliminates and protects from rust.
→ **Antioxidative activity**

Mitochon Water has not rusted during the 70 days-experiment, which proves it has a strong and sustainable antioxidative activity.

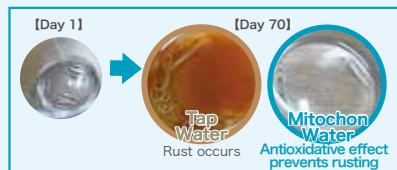

Antioxidative experiment

Experimental procedure:
Two same type of cups were prepared. One had Mitochon Water and the other had tap water poured in. Same type of iron clips were put in both cups, and rust of each cup was observed.

Experimental condition:
Leaving both cups on the same shelf within a room temperature

Experimental period: 70 days
The experiment was conducted by KENKOUKIATSU SANSOKENKYUJO

University of California Principal Investigator at
Osaka University Doctor of Medicine

Yoshiji Aizawa

The secret of youthfulness is your mitochondria to be active!

There are approximately 60 trillion cells in a human body, and within each cell there are 50 to 100 mitochondria. Mitochondria provide ATP, the energy for cells. If a cell is compared to a human body, DNA will be the brain and mitochondria will be the heart. If compared to a car, mitochondria will be the engine. Stress and tiredness make your mitochondria less active and leads to inefficient metabolism, which can also be a reason for your body to produce bad active oxygen. Mitochon Water's high redox potential facilitates the absorption of fucoidan, and also recommended to prevent the stress of mitochondria. Many people who tried Mitochon Water have sent us good comments as well.

What is "fucoidan"?

Fucoidan is a liquid component extracted from mozuku, which is known to recover/normalize human beings' immune strength and improves liver function. It controls blood coagulation, blood pressure, and neutral fat. Also, it is antitumor and antiallergy. These benefits of fucoidan are academically proved, and known to normalize our natural healing-power. The fucoidan combined in Mitochon Water is extracted from mozuku of Kingdom of Tonga, which is known as the highest quality among different fucoidan.

Hardness 90, ph 7.8 a slightly alkaline water good for your health, "Mitochon Water"

6000mg of fucoidan combined

Redox potential -600mv^{*}

*Measured by the manufacturer when packing

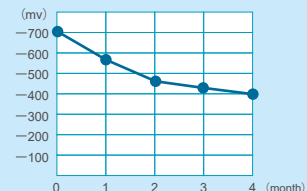

5-layered aluminum pouch is used for Mitochon Water

The right graph shows the data collected using the actual product. (measured by the manufacturer)

The expiration date is set as 4 months after the product is made. However, it is recommended to consume the product earlier as possible.

[The reduction of hydrogen after packing]

Mitochon water has a stronger reduction power than the Lourdes water of France, which is known as the water of miracle.

“Hiroshima no Ishii no Mizu” drew from 300 meters below ground, which is one of the 100 most famous water in Japan conducted by Koichiro Fujita A professor emeritus at Tokyo Medical and Dental University, Microbiology and Immunology is used for Mitochon Water.

Please read before drinking

- The water may have the distinctive smell of fucoidan, but there is no problem with the product quality. To reduce the smell, please cool the product in the refrigerator before drinking.
- Please shake before drinking. Fucoidan may be precipitated in the bottom.
- Best when consumed immediately after opening. To drink the product in several times, pushing the air out of the pouch will help prevent the loss of hydrogen.
