Keep your skin beautiful, forever.

Facial Serum Specialized for Anti-Aging

This ultimate serum contains fucoidan extract which is 99% from Tongan Natural Mozuku combined with proteoglycan extracted from Hokkaido Salmon's cartilage.

Fucoidan extract is considered the "last" serum for human beings, and it is contained abundantly.

Also, by adding proteoglycan, you can feel the moisturizing capacity, skin elasticity, firmness, and gloss beyond your age.

The serum is unscented, uncolored, paraben free, and non-silicon and mineral oil, so it is safe to use.

What is the "FP" of FP Seires?

Improve blemish and wrinkles, and support the beauty of your skin.

FP (Fucoidan Point) is named under the hope that the effect of fucoidan would maintain our immune system, improves our blood circulation, protect, reinforce, and aliment our cells, just as it is affecting to each "point."

The products of the series are experts in keeping your skin young.

The 3 Components Improve Blemishes and Wrinkles.

You can expect you skin to become younger.

Improves blemishes, wrinkles, and elasticity.

Skin friendly natural ingredients

Fucoidan

Fucoidan, a viscous component contained in algae, is a cell activator, which has a function to prevent oxidative decomposition of collagen and hyaluronic acid, the causes of wrinkles. Additionally, it inhibits endothelin to blotch. It is also a natural ingredient gentle to your skin, which has a anti-allergy and anti-inflammatory effect. Furthermore, fucoidan is an invaluable anti-aging component, because its antioxidative effect is so strong that it eliminates active oxygen and moistens the cells while preventing oxidization.

Fucoidan extracted from Tongan mozuku is used with maximum concentration. Both high- and low-molecular fucoidan is mixed with our original technology. Fucoidan is a safe edible component made from natural mozuku. Algae secrete viscous componet to recover itself, and that is the algae essense, fucoidan.

Anti-aging expected from induced turnover.

1.3 times more than hyaluronic acid

Proteoglycan

Proteoglycan induces growth of cells. Also, its high water-holding capacity cures rough skin and wrinkles, maintains youth and elasticity of your skin, and prevents melanogenesis and pigmentation. Proteoglycan's moisturizing capacity is 1.3 times more of hyaluronic acid and cares wrinkles and sagging. Additionally, the EGF* activity induces turnover of skin, which is effective for improving blotches and dullness.

*EGF (Epidermal Growth Factor) plays an important role in controlling cell growth.

How to use

Step 1
Take proper amount of serum. (Spread one push of serum evenly)

Step 2
Put the serum onto several parts of your face and spread it out from inside to outside. You may repeat the procedure to specific parts.

Step 3
Cover your face with your palms and press gently. Press even more gentlier for parts such as around your eyes and lips, where the skin is delicate.

※If you have sensitive skin or allergies, it is recommended to take a patch test before using.
